

## The most balanced adaptive lenses

Transitions lenses are clear indoors and at night but automatically adjust their level of tint to changing light conditions outdoors.

Transitions lenses change from clear to dark in the presence of ultraviolet (UV) radiation, such as when exposed to sunlight. Indoors and at night, Transitions lenses are as clear as regular clear lenses. Outdoors, when exposed to the sun's UV rays, they turn sunglass dark.

### PRODUCT BENEFITS

- Begin to darken instantly once outdoors
- Fast fade back speed
- Blocks 100% UVA and UVB rays
- Suitable for any age including children

### PRODUCT AVAILABLE IN:

Indoors

Mid sunlight

Full sunlight
